mechanical parts for fixing the electronic parts to
specified positions within the display portion, wherein the
mechanical parts comprise at least a thin metallic frame; and
nuts mounted through the thin metallic frame by being
caulked or by being directly threaded.

2. (Amended) The display device of claim 1, wherein a screw inserting portion of the nuts mounted through the thin metallic frame is exposed to outer surface of the display portion of the display device.

3. (Amended) The display device of any one of claims 1 to 2, wherein the nuts are designed to mount the display device to an external device at a predetermined position.

4. (Amended) The display device of any one of claims 1 to 2, wherein the nuts are designed to mount a predetermined accessory part to the display device.

5. (Amended) The display device of claim 4, wherein the accessory part is mounted to a lateral surface of the display device.

6. (Amended) The display device of claim 4, wherein the accessory part is mounted to a rear surface of the display device.

7. (Amended) The display device of claim 5, wherein the accessory part is an electrical circuit part which is concerned in function of the display device.

8. (Amended) The display device of claim 1, wherein the nuts are mounted to lateral surfaces of the thin metallic frame.

9. (Amended) The display device of claim 8, wherein an end portion of the nut is reduced in size on the inner side of the display device.

10. (Amended) The display device of claim 9, wherein the end portion of the nut on the inner side of the display device is reduced in size by being a chamfered end portion.

11. (Amended) The display device of claim 9, wherein the end portion of the nut on the inner side of the display device is reduced in size by being a rounded end portion.

12. (Amended) The display device of claim 9, wherein the end portion of the nut on the inner side of the display device is reduced in size by being a stepped or two-leveled end portion.

13. (Amended) The display device of any one of claims 1 to 2, wherein the display portion performs display of images by utilizing birefringence of liquid crystal.

14. (Amended) The display device of any one of claims 1 to 2, wherein the display portion includes an irradiating portion disposed to irradiate light from the rear surface, with the thin metallic member supporting the irradiating portion and the planar type display portion.

15. (Amended) The display device of any one of claims 1 to 2, wherein the display portion performs display through plasma light emission.

16. (Amended) The display device of any one of claims 1 to 2, wherein the display portion performs display using electro-luminescence.

17. (Amended) The display device of any one of claims 1 to 2, wherein the display portion is composed of minute pixels disposed in any array manner and electron guns disposed to correspond to each of the pixels.

18. (Amended) The display device of any one of claims 1 to 2, wherein the display portion is composed of minute optical reflectors disposed in an array manner.
